## FUNCTIONAL DESCRIPTION

Multi-station manifolds DGMS-3 provides an economical way of building vertical stacked hydraulic circuit using sandwich plate valves in combination with directional valve of size D<sub>n</sub> 06. All hydraulic circuits have a common pressure and tank ports (P, T) that are situated on each end of the manifold. Each control circuit has a separate actuator ports (A, B) situated on the frontal area of the manifold.

## INSTALLATION, SERVICE AND MAINTENANCE

Multi-station manifolds DGMS-3 can be installed in any working position. Port cavities are designed for pipe or hydraulic hose connection. For cavity dimensions of P, T, A, B ports see the chapter Cavity dimensions of this datasheet. Machined pad must be provided if any section is not used.

## DELIVERY

Fittings, machined pads with sealing and mounting screws are not included in the package. These must be ordered separately.
